

powered by G&H Orthodontics®

**Now more than ever, patients are asking for a clear aligner solution.
With these aligners, you can expect:**

- Reliable customer service and support for every case
- Average refinement rate of 5% and up to 20% fewer aligner stages
- A complete solution from your local lab
- Intuitive software that is easy for experienced and new staff to navigate
- Made in the USA with premium thermoformed materials and FDA-approved

I can truthfully state that the software and aligners compete with the best of them. I've noticed better molar control and torque, more efficient arch expansion, significantly less refinements, faster overall treatment times, and less dependence on attachments.
